Outline

- Questions 1-40 Multiple Choice ≈ Two-Minute
- Questions 41-47 Not Multiple Choice ≈ Four-Minute
In reviewing for the mathematics portion of the exam I found that there were quite a few problems that were straightforward and simple. However, there were problems that were:

- More intensive
- Difficult

I recommend that you make two passes through the material. The first pass should be used to knock off the straightforward or easy problems and mark problems, which will require more intensive calculations. These problems can then be dealt with in the second pass. If there is any time then the difficult problems can be addressed.
