

**Patricia Rodrigues** is currently pursuing doctorate studies in Geophysics with a Petroleum engineering minor. She received her Bachelors and Masters degrees in Chemical Engineering from Universidad Simon Bolivar in Caracas Venezuela in 1991 and 2000 respectively. She has 12 years of experience dedicated to research and application of reservoir characterization technologies, specializing in petrophysics and rock physics in the oil and gas industry. She is highly experienced in integrating petrophysical and seismic data through rock physics analysis as well as integrating engineering, geology and petrophysical data to improve reservoir and prospect evaluation. She has extensive experience in characterization of different type of reservoirs (carbonates, clastics, shales, fractured) in different basins in the US, Canada, Venezuela and Brazil.
