Example of figure that is wider than tall

Figure must be rotated to landscape mode with the page number at the bottom of the page.

Figure 5.13 S-wave cusp in the transmission experiment: (a) The wavefield simulated with the spectral element method; (b) the wavefield recorded by the laser vibrometer. The solid line is the S-wave time modeled using the inverted parameters from Figure 5.11. The observed cusp is larger than that predicted by the group-velocity surface.
